Staff Technical Writer | Developer Education & Content Systems

Summary

Staff-level technical writer with 15+ years building developer education systems for web platform APIs, enterprise SDKs, browser technologies, developer tools, and enterprise deployment workflows. I help engineering organizations ship products with documentation that accelerates adoption: from API references and integration guides to onboarding workflows and troubleshooting content.

I own the full content lifecycle: docs-as-code infrastructure (GitHub, Docusaurus, CI/CD), information architecture that supports both human search and AI-mediated discovery, and contributor enablement systems that scale technical authorship across cross-functional, distributed teams.

Recent work includes Chrome developer content with AI-assisted drafting and a docs-as-code documentation system that enabled the docs team to achieve 100% release-aligned publication.

Experience

MTP, Inc.

Sr. Technical Writer, Chrome Developer Social Content
June 2026 – present | Remote

Embedded with Google's Chrome for Developers social media team, adapting complex web-platform education for high-reach developer channels while maintaining technical accuracy throughout editorial, design, production, and publication workflows.

- Draft and refine technical content for Chrome developer channels (X, Bluesky, Instagram, LinkedIn, YouTube) that drives awareness and adoption of web platform APIs, browser capabilities, and Chrome developer tools.
- Accelerate drafting using AI writing assistance while validating technical claims against W3C specifications, MDN and Chrome reference documentation, and Google-owned blogs.
- Collaborate with editorial, design, production, and developer relations stakeholders to ensure that published content is accurate, concise, audience-appropriate, and appropriate in tone for each channel.
- Identify unclear or incomplete technical source material during review and resolve discrepancies before publication.

HERE (here.io, formerly OpenFin)

Lead Technical Writer *| Nov 2020 – Feb 2026 | Remote*

Led developer and administrator content for the HERE enterprise browser and SDK platform used by financial services firms to build, integrate, secure, and deploy enterprise trading and wealth management applications. Combined hands-on authorship with

ownership of content architecture, docs-as-code platform, contributor enablement, and cross-functional release leadership.

- Modernized content delivery by migrating from a SaaS platform to a GitHub-based docs-as-code architecture using Docusaurus, GitHub Actions CI, and staged deployment workflows. Integrated documentation into the product development and engineering release processes, increasing release-aligned publication from 93% to 100%.
- Created API references, SDK guides, integration tutorials, onboarding content, configuration and deployment guidance, troubleshooting workflows, and release notes.
- Tested onboarding, integration, configuration, security, and deployment workflows directly, identifying documentation gaps and product rough edges before release.
- Worked from requirements, architecture documents, API specifications, source files, demo videos, and staging builds to reduce engineering review burden and ship accurate content.
- Partnered with engineering, QA, product management, support, customer solutions, and enterprise deployment teams to validate product behavior and align content with audience needs and release priorities.
- Designed information architecture, navigation patterns, and task-based learning paths for developers (junior to staff-level), enterprise IT administrators, and customer implementation teams.
- Integrated documentation readiness into product requirements, release quality criteria, and delivery checkpoints.
- Enabled engineers, product managers, and other contributors to create technical content through Markdown templates, standards, GitHub-based review workflows, source-tracking practices, training, mentoring, and structured feedback.
- Improved documentation search and discoverability by implementing TypeSense and structuring navigation around developer tasks and API use cases.
- Prioritized content improvements using customer feedback, support insights, product changes, and implementation needs.

Mozilla

MDN Staff Technical Writer: *Jan 2020 – Aug 2020 | Remote*

Created authoritative, search-oriented developer education for MDN Web Docs covering web platform APIs, CSS, web security, Firefox Developer Tools, and evolving browser capabilities.

- Authored content for a documentation platform that consistently achieved successful-session ratings above 80%, based on the rate of users reporting that they found the information they needed.
- Wrote conceptual guides, tutorials, reference content, and troubleshooting guidance that helped developers evaluate, adopt, and use web platform features.
- Collaborated with Firefox engineers to ensure documentation accuracy and alignment with browser releases and platform changes.
- Structured content to support developers moving between conceptual guides, implementation tutorials, API references, and troubleshooting workflows.

MDN Developer programs & documentation community leadership roles
Mar 2013 – Dec 2019 | Remote

- Built and supported distributed contributor systems for developer documentation, coordinating coverage across global staff and volunteer contributors.

- Mentored contributors and provided technical and editorial feedback that improved content consistency, completeness, and quality.
- Developed contributor workflows and scalable collaboration practices for documenting rapidly changing web-platform APIs.
- Facilitated Large Scale Scrum (LeSS) processes for MDN documentation and development teams and migrated work-tracking systems to support distributed contributors.

MDN Technical Writer/Community Steward | *Jun 2010 – Feb 2013* | *Remote*

- Authored and edited developer documentation covering HTML, CSS, JavaScript, web platform APIs, and standards-based web application development.
- Supported contributor workflows for a global developer-documentation community.

Lombardi (IBM acquisition)

Sr. Information Developer | *2009 – 2010* | *Austin, Texas*

- Produced structured enterprise software documentation covering system architecture, configuration, and deployment using DITA single-sourcing workflows for multi-channel reuse across web, PDF, and in-product help.
- Built a metadata-driven proof-of-concept for reusable, workflow-governed proposal content integrated with the company's BPM platform (Teamworks).

Enthought

Sr. Technical Writer | *2004 – 2009* | *Austin, Texas*

- Documented Python-based scientific libraries and applications used in engineering and research environments, including SciPy, NumPy, and Enthought Python Distribution.
- Developed Python tooling for content-tool integration and context-sensitive application help.

Developer Education Systems & AI-Enabled Content Operations

- Designed, implemented, and operated docs-as-code infrastructure integrating GitHub, GitHub Actions, CI pipelines, Docusaurus static site generator, Markdown, and staged publishing (development to staging to production).
- Established information architecture, terminology, review practices, reusable content patterns, governance, and quality controls that supported scalable, accurate, and maintainable developer education.
- Applied AI writing assistants for drafting, editing, and summarization with source verification against specifications, human review gates, and evaluation for technical accuracy and usability.
- Developed content structures and discoverability practices that support traditional search, task-based retrieval, content reuse, and emerging AI-mediated learning experiences.
- Enabled distributed contributors through standards, templates, training, mentoring, automation, and structured feedback.

Skills

- **Developer education:** Conceptual guidance, API references, SDK documentation, integration, onboarding, and implementation guides, troubleshooting, release content
- **Developer technologies:** Browser APIs, HTML, CSS, JavaScript, web security, developer tools, standards-based web applications, Python libraries
- **API and structured source material:** OpenAPI, Swagger Portal, YAML, JSON, requirements and architecture documents, code source files, specifications
- **Content systems and tools:** Docs-as-code, Git, GitLab, GitHub, GitHub Actions, Docusaurus static site generator, Markdown, reStructuredText, Confluence, staged publishing
- **Content architecture and operations:** Information architecture, navigation design, search and discoverability, content governance, review workflows, reusable content patterns, content lifecycle management
- **Developer experience:** Workflow testing, developer onboarding, integration guidance, enterprise configuration, implementation support, self-paced learning
- **AI-assisted content:** LLM-assisted drafting, editing, summarization, content adaptation, technical review support, source validation, and evaluation of AI-generated content
- **Methodologies**: Agile, Large-Scale Scrum (LeSS), cross-functional collaboration with engineering, product, QA, support, and customer solutions teams

Education

- University of Chicago, B.A. in Humanities
- University of Texas at Austin, coursework in: Data Structures, Analysis of Programs
- Austin Community College, coursework in: Java Programming, Technical Writing
- Certified LeSS Practitioner®—The LeSS Company B.V., 2018
